Air Foam chamber factory direct sales reasonable good price and high quality

Air foam chamber is a fire extinguishing equipment fixed on the oil tank to produce and spray air foam to extinguish oil fires. Its foam proportional mixing device uses the foam mixture supplied by a fixed fire pump to flow through the pipeline to produce a certain pressure, and the foam formed in contact with air can extinguish oil fires.

The device is a device that mixes the foam mixture produced by the foam proportioning device with the inhaled air to form foam, and sprays the foam onto the surface of the burning liquid, forming foam to isolate the air and absorb heat, thus extinguishing the fire.

Foam chambers are available in vertical and horizontal types.

Mainly used for fire fighting of A, B and C liquid storage tanks, fixed on the wall of the tank, easy installation and maintenance, low cost
